

Intellitec Motor Controls

Intellitec Motor Controls

Intellitec offers a wide variety of motor controls for use in vehicles. These controls are used to operate the motors of accessories such as power mirrors, power windows, power seats, HVAC fans, power sofas, and slide out rooms in RV's, from low current switches in the user panels. They control speed and or direction of the motors. Many of these controls include adjustable, electronic over load sensing to prevent burning out motors or opening of mechanical circuit protection devices such as fuses or circuit breakers. Some of these controls are capable of multi-point control allowing the operation of the motor function from various locations in the vehicle. This can be useful for functions such as power windows, power door locks, and power sofa controls.
